THE FULL SERVICE EXPERTS

Whether you purchase one of our Marani Hard Hose Irrigators, Turbine, Piston, Boom or Travelling Irrigators, we understand that it is a big investment and that is why we offer the complete service.

The sales team at Rodney Industries is with you and your dealer throughout the entire process, from finding the best irrigator to suit your requirements both financially and performance wise, right through to stocking all the accessories.

We have the fittings, hose, guns, sprinklers and diesel pump sets for your entire project.

Our trained staff not only complete a comprehensive pre delivery check on all our irrigators prior to despatch, but are also available to assist with the commissioning of your new machine. Once the machine is installed, we continue our service to you with ongoing support, spare parts and all of your after sales service needs.

It is this ongoing product evolution and guaranteed quality systems which drive our team to remain one of the leading suppliers to the irrigation market in Australia.

SPORTING FIELDS

Suitable Models

- **RI Range:** RI-10, RI-20, RI-30
- **Orma Hard Hose:** Leader 20, Leader 25, Leader 32, Leader 40, Leader 50, Leader 63
- **Marani Hard Hose:** F010B

PARKS & GARDENS

Suitable Models

- **RI Range:** RI-30
- **Water Winch:** RI-350P
- **Orma Hard Hose:** Leader 20, Leader 25, Leader 32, Leader 40, Leader 50, Leader 63
- **Marani Hard Hose:** F010B

DAIRY FARMS / SMALL CROPS

Suitable Models

- **Water Winch:** RI-350P
- **Turbo Winch:** RI-350T, RI-450T
- **Orma Hard Hose:** Leader 50, Leader 63
- **Marani Hard Hose:** F010B, GT015B

MEDIUM CROPS

Suitable Models

- **Water Winch:** RI-350P
- **Turbo Winch:** RI-350T, RI-450T
- **Marani Hard Hose:** Entire range
- **Rainspan Boom:** SB550
- **Briggs Boom:** R18, R24, R30, R40, R46

LARGE CROPS

Suitable Models

- **Marani Hard Hose:** GT050B, GT060B, GT070B, GTS080B, GTS090C, IT050B, IT060B, IT070B, ITS080B, ITS080C, ITS090C, IT100B
- **Rainspan Boom:** SB2000
- **Briggs Boom:** R40, R46, R50/2, R64/2, R76

RI RANGE

TRAVELLING IRRIGATORS

THE SMALL BUT MIGHTY

Formally a part of the Southern Cross Range of irrigators, our RI Range consists of 3 smaller sized irrigators the RI 10, RI 20 and RI 30.

These Australian designed and manufactured irrigators boast hot dipped galvanizing to protect the machines from the harsh elements as well as increase their durability. They are simple to operate and have the power to handle all conditions.

Other features include:

- Self – propelled
- Auto stop
- Integral hose reel (RI-20/30 models)
- Adjustable speed
- Positive drive via winch cable & anchor

THE RANGE

RI 10

RI 20

RI 30

RI RANGE TRAVELLING IRRIGATORS

RI 10

MACHINE FEATURES

- Water-jet powered rotary driving arms acting through high quality worm reduction drive to cable winch.
- Heavy duty welded steel chassis all hot dip galvanized.

WATER WINCH

TRAVELLING IRRIGATORS

The Rodney Industries' Water Winch is the ideal machine for irrigating sporting fields right through to medium scale crops.

We understand that every irrigation project is different. With our range of Water Winch Travelling Irrigators, you can take our base model and add the options you need – purge kit etc.

There are many other features that allow our Water Winch Travelling Irrigators to stand out from the competitors, here are just a few:

- Australian designed and manufactured
- Piston type water motor
- Positive drive via winch
- Cable and anchor
- Hot dip galvanized
- Self – propelled
- Safe and easy operation
- Auto stop
- Heavy duty design
- P.T.O hose reel
- Adjustable speed
- Spare parts and backup service available

FEATURES

FULLY WELDED HOSE REEL

- Rigid galvanized hose reel.
- Protects drive train from the elements.

SIMPLE ACTUATING SYSTEM

- Easy adjustment.
- Robust design.
- Low maintenance.

POWERFUL WATER MOTOR

- Large bore double acting cylinder.
- Powerful operation for heavy soil conditions.

REAR WHEEL BRAKES

- Quick and easy to use

DUAL ROCKER ARMS

- Drive unit on top of chassis.
- Easy access for maintenance.

ROLLER BOX

- Telescopic.
- Polyurethane rollers.
- Limits wear on hose.

TOUGH TERRAINS?

The type of terrain is a key factor in determining which irrigator to purchase. Some terrains require a machine to have the extra stability from wider tyres. Perhaps you need to reduce rutting in your crop? Or even soil compaction? That's why with the Rodney Industries' Water Winch, Floatation tyres now come standard!

WHEN PERFORMANCE MATTERS

In the field of large-volume sprinklers, Nelson Big Guns® are recognized the world over as the leader in quality and performance. They are engineered and precision manufactured for heavy-duty reliability and long wear life with minimum maintenance required. Every Nelson Big Gun® is subjected to the toughest inspection testing and quality control standards in the industry.

WATER WINCH

RI 350P

MACHINE DETAILS

Sprinkler:	Nelson SR100 \ Nelson SR150 \ Nelson 200
Hose:	2.5" up to 200m 3" and 3.5" up to 200m 4" up to 150m
Flow Rate:	5.15 to 34.42 litres per second
Operating Pressure Range:	413 to 620 kPa
Travel Distance Per Run:	Up to 400 metres
Wetted Width:	69 to 132 metres
Driving Mechanism:	Double acting cylinder water motor and drive mechanism for reliable services in the heaviest soil conditions.
Construction:	Heavy duty welded steel chassis all hot dip galvanized.
Hose Reel:	Fully welded, galvanized hose reel.

MACHINE FEATURES

- Australian designed and manufactured
- Piston type water motor
- Positive drive via winch
- Cable and anchor
- Hot dip galvanized
- Self – propelled
- Safe and easy operation
- Auto stop
- Heavy duty design
- P.T.O hose reel
- Adjustable speed
- Spare parts and backup service available

Weight does not include gun or hose.

Please note weights and dimensions are to be used as a guide only. Contact Rodney Industries or your local distributor for more detailed specifications.

TURBO WINCH

TRAVELLING IRRIGATORS

The Rodney Industries' Turbo Winch is the ideal machine for irrigating sporting fields right through to medium scale crops.

There are many other features that allow our Turbo Winch Travelling Irrigators to stand out from the competitors, here are just a few:

- Australian designed and manufactured
- Radial inflow turbine
- Fully galvanized chassis
- Travel shut off mechanism
- Industrial type 4 speed gearbox
- Four wheel stance
- Safe and easy operation
- Robust construction
- Spare parts and backup service available

FEATURES

RADIAL INFLOW TURBINE

- Delivers high torque at low RPMs.
- Efficient when under load.
- Full power available when most needed - near end of run.

INDUSTRIAL TYPE 4-SPEED GEARBOX

- Speed of travel to suit any crop can be easily selected.
- Extremely flexible speed range.

HOSE REEL DRIVE RELEASE

- Manually disengage drive for easy hose layout.

ROBUST CONSTRUCTION

- Easy to tow.
- No jack needed to support draw bar.
- Pivoting from axle adjusts to uneven terrain.

PURGE PUMP

- High quality, high volume.
- Robust purge for faster, trouble free purging.

P.T.O. CONNECTIONS AT FRONT

- Hose purge and hose wind-up operations are carried out from the towing position. This means machine anchorage and convenience of operation.

WHEN PERFORMANCE MATTERS

In the field of large-volume sprinklers, Nelson Big Guns® are recognized the world over as the leader in quality and performance. They are engineered and precision manufactured for heavy-duty reliability and long wear life with minimum maintenance required. Every Nelson Big Gun® is subjected to the toughest inspection testing and quality control standards in the industry.

TURBO WINCH

TURBO WINCH

RI 350T

MACHINE DETAILS

Sprinkler:	Nelson SR150 21° - Nelson SR200 21°
Hose:	3" to 3.5" Hose up to 200m 4" Hose up to 150m
Flow Rate:	12.43 to 39.50 litres per second
Operating Pressure Range:	482 to 620 kPa
Travel Distance Per Run:	Up to 400 metres
Wetted Width:	92 to 136 metres
Driving Mechanism:	Exclusive Radial Inflow Turbine. Specifically designed for travelling irrigator requirements. Delivers high torque at low RPMs; especially efficient when under load.
Construction:	Robust construction. Easily attaches to towing vehicle no jack needed to support draw bar.
Hose Reel:	Fully welded, galvanized hose reel.

MACHINE FEATURES

HOSE TRAILERS

There are many other features that allow our Hose Trailers to stand out from the competitors, here are just a few:

Chassis

- Heavy Construction
- Fully galvanised
- High clearance

Pantograph Roller Arm

- Adjustable to allow the hose to be laid out either side of lane way.

Hose Reel Drive Release

- Manually disengage drive for easy hose layout.

Hose Reel

- Easy to operate
- Heavy tubular steel spool.
- Hose reel accepts the hose at a wide variety of angles. The flat base is for maximum hose protection to maximise hose life. An adjustable hose reel brake is fitted for better control on the hose layout operation.

P.T.O. Hose reel Rewind

- The P.T.O. is permanently fitted to allow hose retrieval to be carried out while in the towing position.

HOSE TRAILER

Ground Clearance (mm)	Length (mm)	Width (mm)	Height (approx. mm)	Weight (approx. kg)
400	3400	2000	1400	450

- Hose Sizes: 3.5" upto 4.5".
- Maximum Hose Length: Double reel - 2 x 200m.
- Please note that weight and height will vary depending upon model.

Mec1000 Purge	76905	3,654.80
Mec1600 Purge	76923	3,441.10

MARANI

HARD HOSE IRRIGATORS

Marani has one of the largest specific ranges of poly reel irrigators available in all markets worldwide ranging from a 40mm to a 160mm machine.

Marani assemble and offers to their customers the fourth generation turbine system, providing excellent results even at very low pressures: 2-3 bar when using the spray boom and 5-6 bar when using the rain gun.

The choke-flow turbine with built in bypass and flanged directly to a gearbox represents a significant advance in hose reel irrigators drive system and makes the system very reliable for a performance point of view.

Every machine is complete with its manuals and instruction stickers, spare parts lists and performance sheets, everything the end user needs for running the machine easily.

WHY MARANI HARD HOSE IRRIGATORS?

FULLY GALVANIZED

- Corrosion resistance
- Extra durability

FOURTH GENERATION CHOKE FLOW

- Lower pressure loss over turbine
- More economical to run
- Gives a wider speed control range
- Direct coupled to gearbox

HDPE HOSE

- Manufactured to resist heavy drags
- Will work at high pressures

TACHOMETER

- Retraction speed can be instantly read out

DRUM SUPPORTS

- Drums are supported by large water proof bearings increasing drum life

Hose Guide System – Scroll Bar

- Guarantees a perfect layering of the PE hose
- Reduces hose wear to a minimum

MARANI HARD HOSE IRRIGATORS

FREQUENTLY ASKED QUESTIONS

Being Italian made, are there spare parts readily available?

We already have a huge range of spare parts not only for Marani machines but for some other well known brands which are readily available in Brisbane.

Will I get back up support?

Yes. Rodney Industries and Vinidex are embarking on establishing a solid back up team to the industry with having 3 people dedicated to irrigator sales and support through RI and a team of sales people in every state to help with your enquiries. This adds up to approximately 20 people nationally for support.

Will I save money compared to other hard hose gun options?

Yes. Due to the next generation turbine which is coupled to the gearbox and the HDPE pipe; it will work at a lower operating pressure to other machines on the market. This will mean that you can get lower energy bills, but also that you can get the higher flows required through smaller machines; saving on the capital outlay as well!

Why is it they use HDPE pipe?

HDPE is stronger and has the ability to have a larger internal bore creating less friction loss whilst being able to take increase flows of water. Being a stronger PE, the likelihood of seeing damages to the pipe and gaining an extended life.

Can I pump effluent?

Yes they can pump effluent; so long as it is fairly clean. They are pumping effluent in all parts of the world as many places around the globe only have effluent available to them for pumping in their agricultural markets.

I may want to put a boom attachment on at a later date; is it possible?

This is as easy as unbolting the flange of the gun trolley and re-bolting the boom onto it. Of course you will have to adjust your pump to work within the pressures and flows of the booms specifications. We offer the Briggs range of folding booms which is universally recognized as the best booms in the industry.

Are they strong and durable machines?

Marani is recognized globally as having one of the strongest built machines. They have been building machines since 1970 and have stood the test of time. They have a very solid chassis and use the best technology available throughout the entire machine. Their gearbox is super tough whilst having a very user friendly gearbox and turbine structure.

Are they stable when operating?

Yes. Marani have a very strong and over engineered frame design. They go to such lengths in creating a machine that won't move that even their smallest machines have a full chassis to operate from.

Will they maintain a consistent travelling speed?

Due to the full Marani range having a mechanical compensator which is adjustable, they maintain a very consistent travelling speed throughout the run. This can also be upgraded to a computer to have a more accurate timing of the run.

THE MARANI TURBINES

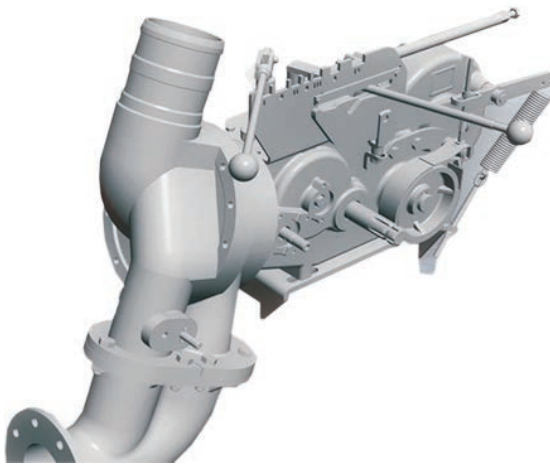

Turbine system for GT models

Marani Fourth Generation Turbine and Gearbox used on GT Machines are proven for Low Pressure applications and the Gearbox has been used for Both Gun Trolley Boom Irrigators for over 10 years.

The Choked-Flow Turbine with built in bypass is flanged directly to the Gearbox. This also eliminates a Transmission belt and external by pass. This makes the system reliable from a performance point of view Turbine is made with special Aluminium and machined using CNC machining Centre.

Turbine system for GTS and ITS models

The Marani GTS and ITS Models use the most efficient turbine on the market and when direct coupled with the new Gearbox they are proven to require less water and pressure, allowing more to flow through to your gun.

You can also easily see what speed you are in with the top gear change: 1-2-3-4.

- With the Lower gear change when in the Left position: hose is ready to pull-out & PTO wind-up.
- Centre position: drum lock down for transport
- Right position: working position

If a Foreign Object jams up the impeller just reverse the impeller by turning the outlet shaft next to turbine.

MARANI HARD HOSE IRRIGATORS

CONTROLLER OPTIONS

MA RAIN 26

The MA-Rain 26 computer features the following programmable functions:

- Working speed in mt\h or ft\h.
- Delayed start (in minutes) before retraction starts.
- Delayed stop (in minutes) before opening or closing the discharge valve (optional) or the shut-off valve (optional).

The monitor then indicates:

- Remaining working time in hours and minutes.
- Working speed in mt\h or ft\h.
- Meters\feet of unwound hose.

MA RAIN 56

The MA-Rain 56 computer features the following:

- Compact case.
- 4" high contrast, colour display.
- Optical encoder, for a fast selection of settings.
- 2 x 4 keys for navigation with back lighting.
- Additional keys for alarm setting.
- I/O control module.
- On/Off key.
- Commands and features have an intuitive graphical user interface, to avoid keys in the lingo.
- Detailed alarm chart, with explicit reference to the components.
- Fast and easy parameters'/datas' settings.
- Software's update with USB key.

DIGITAL IRRIGATION 4.0

The Marani digital irrigation system analyses and conveys your irrigation scenario to the mobile device of your choice.

Location of the machines, lines to be travelled during the work phases and a volume of processed information that suggests how much water to distribute and where. As the weather and ground moisture conditions change, the software reworks the parameters and provides the new situation. Your intervention is as timely as using your fingers to press a button on the touch display.

MARANI HARD HOSE IRRIGATORS

MARANI HARD HOSE IRRIGATORS

F010B 40mm x 130m

Item Code: F010B40130

STANDARD EQUIPMENT

- SIME K1 24° Part Circle Gun and nozzles
- Pressure gauge (glycerine bath)
- Mechanical feet
- Hot galvanized chassis and reel
- Single Gear Multi Speed gearbox
- Winding handle
- Water Inlet Shut-Off Valve
- Safety guards
- Flexible connection pipe 2" x 6m
- Galvanized raingun trolley
- Turbine flanged on the gearbox with external bypass
- Hose reel brake
- Water filter

TECHNICAL DATA

Pressure at Inlet (BAR)	Flow Rate (L/M)	Wetted Width at 80% (Mtr)
3.6 - 7.7	71 - 155	28 - 34

Model	Code	Price
F010B 40mm x 130m	F010B40130	18,419.00

Controller Options	Code	Price
Computer Ma-Rain 26 kit c/w solar panel and pressure switch	35462701KIT	2,765.30

WEIGHTS AND DIMENSIONS

SIZE (cm)			
A	B	C	D
195	150	128	126

Dry Weight 320 kg

* Please note dimensions and weights are to be used as a guide only.

MARANI HARD HOSE IRRIGATORS

F010B

50mm x 170m

Item Code: F010B50170

STANDARD EQUIPMENT

- SIME Hidra Part Circle Gun and nozzles
- Pressure gauge (glycerine bath)
- Mechanical feet
- Hot galvanized chassis and reel
- Single Gear Multi Speed gearbox
- Winding handle
- Water Inlet Shut-Off Valve
- Safety guards
- Flexible connection pipe 2" x 6m
- Galvanized raingun trolley
- Turbine flanged on the gearbox with external bypass
- Hose reel brake
- Water filter

TECHNICAL DATA

Pressure at Inlet (BAR)	Flow Rate (L/M)	Wetted Width at 80% (Mtr)

MARANI HARD HOSE IRRIGATORS

GT060B

110mm x 420m

Item Code: GT060B110420

STANDARD EQUIPMENT

- Ma-Rain 26 Kit c/w solar panel and pressure switch
- SIME Reflex and nozzles
- Telescopic hydraulic feet
- Pressure gauge (glycerine bath)
- 4 Speed gearbox
- Winding handle
- Hot galvanized chassis and reel
- Safety guards
- Water Inlet Shut-Off Valve
- PTO
- Flexible connection pipe with storage reel
- Galvanized raingun trolley mounted on variable track hard rubber wheels
- Turbine mounted on the gearbox with built-in bypass
- 5 wheel trolley
- Water filter
- Hydraulic lifting of trolley
- Hydraulic rotation of turntable
- Hydraulic lifting of drawbar

TECHNICAL DATA

Pressure at Inlet (BAR)	Flow Rate (L/M)	Wetted Width at 80% (Mtr)
4.6 - 10.6	623 - 1320	62 - 90

Description	Code	Price
GT060B 110mm x 420m	GT060B110420	110,966.00

Machine Options	Code	Price
Emptying Compressor	75430550	4,250.90

Controller Options	Code	Price
Ma-Rain 56 Kit	35510120SKIT	7,391.80
No Computer	DED35462700KIT	POA
Digital 4.0 Router option for Ma-Rain 56	35400262	10,426.50
Wireless Measuring System for Ma-Rain 56 computer	35400350SKIT	1,803.50

Sprinkler Upgrade Options	Code	Price
SIME Mariner Big Gun	RGUPREF-MAR	412.30
SIME Mariner 2 Speed	RGUPREF-MAR2S	679.50
Nelson SR150 Gun	RGUPREF-SR150K	2,976.50

MARANI HARD HOSE IRRIGATORS

GT070B

110mm x 500m

Item Code: GT070B110500

STANDARD EQUIPMENT

- Ma-Rain 26 Kit c/w solar panel and pressure switch
- SIME Reflex^o and nozzles
- Telescopic hydraulic feet
- Pressure gauge (glycerine bath)
- 4 Speed gearbox
- Winding handle
- Hot galvanized chassis and reel
- Safety guards
- Water Inlet Shut-Off Valve
- PTO
- Flexible connection pipe with storage reel
- Galvanized raingun trolley mounted on variable track hard rubber wheels
- Turbine mounted on the gearbox with built-in bypass
- 2 Large flotation wheels
- 5 Wheel trolley
- Water filter
- Hydraulic lifting of trolley
- Hydraulic rotation of turntable
- Hydraulic lifting of drawbar

TECHNICAL DATA

MARANI HARD HOSE IRRIGATORS

MARANI HARD HOSE IRRIGATORS

GTS090C

140mm x 500m

Item Code: GTS090C140500

STANDARD EQUIPMENT

- Ma-Rain 56 Kit c/w solar panel and pressure switch
- SIME Explorer Big Gun 25° and nozzles
- 4 wheel chassis
- Flexible connection pipe
- Computer Ma-Rain 56
- Hydraulic lifting device of trolley
- PTO
- Hose retraction by double chain
- Hydraulic rotation of turntable
- Water Inlet Shut-Off valve
- Hot galvanized chassis and reel
- Hydraulic system by rapid couplings to tractor with storage reel
- 5 Wheel trolley with variable track hard rubber wheels
- Turbine mounted on the gearbox with built-in bypass
- Telescopic hydraulic feet
- Pressure gauge (glycerine bath)
- Winding handle
- Hydraulic lifting of drawbar
- Safety guards made of steel swaged galvanised and painted
- 4 Speed gearbox with synchronised speeds
- Electric shut off valve
- Pressure Switch
- Emptying Compressor
- Water filter

MARANI HARD HOSE IRRIGATORS

MARANI HARD HOSE IRRIGATORS

IT050B

110mm x 350m

Item Code: IT050B110350

STANDARD EQUIPMENT

- Ma-Rain 26 Kit c/w solar panel and pressure switch
- SIME Reflex gun and nozzles
- Hydraulic lifting device of trolley
- 4 Speed gearbox
- Water Inlet Shut-Off Valve
- Hydraulic rotation of turntable
- PTO
- Pressure gauge (glycerine bath)
- Hydraulic feet
- Flexible connection pipe
- Hydraulic lift of drawbar
- Hot galvanized chassis and reel
- Speed equalizer
- Winding handle
- Safety guards
- 5 Wheel trolley
- Hydraulic system by rapid couplings to tractor with storage reel
- Galvanized 5 wheel raingun trolley mounted on variable track hard rubber wheels
- Turbine mounted on the gearbox with built-in bypass
- Water filter

TECHNICAL DATA

Pressure at Inlet (BAR)	Flow Rate (L/M)	Wetted Width at 80% (Mtr)
4.3 – 11.2	623 – 1570	62 – 94

Description	Code	Price
IT050B 110mm x 350m	IT050B110350	87,704.90

Machine Options	Code	Price

ORMA

HARD HOSE IRRIGATORS

The elegant, safe and simple irrigators for gardening, horticulture, sports and agriculture.

The innovative high performance ORMA turbine drive allows the utilisation with various water qualities, including recycled and the possibility to add fertilizers.

Their range of irrigators are the result of the ongoing innovation and experience since the 1970s.

The ORMA irrigation machines are characterized by careful attention to details, robustness and ease of use.

Applications for the range include:

Turf Watering

playing fields, parks, gardens, lawn planting, golf courses, race courses.

Agriculture

Small crops, nurseries, turf farms.

ORMA HARD HOSE IRRIGATORS

The elegant, safe and simple irrigators
for gardening, horticulture, sports and agriculture.

RAINSPAN

BOOM IRRIGATORS

The Rainspan Boom Irrigator Range has evolved into the most reliable, strongest, efficient and user friendly machine.

The range has a unique turbine technology to provide the most efficient, lowest pressure, economical travelling boom in the industry. Other features of the Rainspan Range include:

- On Board Hose Reel Perma-coupled hose makes it easy to lay out hose and cable in the one operation
- Gearbox for smooth safe operation specifically designed for Irrigators
- New Generation Turbines that are the best in the industry
- Reliable High volume Purge Pump
- Boom lengths from 54m (64m wetted width) to 99m (119m wetted width)
- Runs up to 600m
- Auto stop

Why Rainspan Soft Hose Booms?

SAVE WATER!

A high degree of uniformity, (85% or better in the SB2000 machines), in water application along with the fact that the water is applied directly where it's required ensures a minimum of waste. Little water can be lost by evaporation or wind drift. In fact, it is rare that conditions would be too windy to irrigate with the SB Boom Irrigator.

SAVE TIME!

The Rodney Industries SB Boom Irrigator is easily moved and operated by one person and requires minimal maintenance due to its outstanding simplicity and reliability. Larger volumes of water can be applied in shorter periods of time and there is no laborious shifting of spray lines etc. The boom can be slewed hydraulically allowing easy manoeuvring from the tractor while in transit.

RAINSPAN BOOM IRRIGATORS

FAQs

Will I save water?

Yes. As you are putting water where you want it, you don't have to put as much on and the overlap is a lot less than a typical gun operation. You can expect to save as much as 40% to a typical big gun application.

Is the uniformity good?

The uniformity is excellent in the SB2000's! With the inclusion of a compensator as standard on these machines you can expect to get at least 85% uniformity over the pass (even in windy conditions). It has been reported as much as 96% uniformity in some trials.

Can I operate when the wind is up?

The wind can not stop a Rainspan. With the Nelson R3000 rotator sprinklers or the Seninger X I Wob, and the design of the boom, we will still operate efficiently even when the wind is up. We have booms operating in the windiest of conditions such as seen in North Queensland and New Zealand where our booms excel.

What is the overlap that you recommend?

The overlap for all booms, (including end guns) is 2 metres of wetted width.

It looks difficult to manoeuvre around; is it?

Many people have the perception that booms are really difficult to manoeuvre. This is not the case! It is really user friendly to manoeuvre and can be done as a 1 man operation. As the boom can be slewed from the tractor, you can get around the farm easily with care. This can generally be done in approx 30 minutes.

I hear some booms tip over easily; are Rainspan's the same?

The Rainspan Boom is designed for strength and stability. They do not tip over and operate in conditions that other booms just won't operate. We have had an instance where 3 pivots went over, whilst the 80mtr boom escaped unscathed.

I'm having trouble getting to all the corners of my block with my pivot; will this help?

As the boom walks laterally you can cover 100% of your blocks and irrigate every square inch required. A lot of our booms that are sold go hand in hand with pivots and are used in the areas where the pivot can't get to.

Can I pump effluent with it?

The turbine on the SB2000 range are designed to take effluent without any problems. We currently have machines pumping effluent that have been going for many years now and do not look like failing.

How strong is it?

Rodney Industries is known for the quality of the metals range and the core value of the business is "products that last". This is certainly true for the Rainspan Booms that are that strong you can drive over the pipes that are used to build the boom out of. The Rainspan Boom has stood the test of time and as they are hot dipped galvanised, they will last and last.

WHAT'S IN A TURBINE?

Rainspan's state-of-the-art Axial Water Turbine is a very simple and powerful motor at the heart of the SB2000.

Requiring no fuel, batteries or electricity and very little maintenance, it is an excellent alternative to combustion engines.

The quality and simplicity of both design and componentry make Rainspan's Turbine unique and superior to all others.

All components are abrasion and corrosion resistant and are machined and assembled to very high standards making it very reliable for many years.

RAINSPAN BOOM IRRIGATORS

BOOM LAYOUT

Plan View

Side View

- The overlap for all booms, (including end guns) is 2m of wetted width
 - To calculate the overlap. Nelson PCR3000 Relative Throw Distance 7m to 12m
 - To calculate the overlap with End Guns. Sime K1 Teso 8° Relative Throw Distance 12m. (eg Width of boom 41m + Throw 24m = 65m – overlap 4m = 61m wetted width overlap each side 2m.)
- A. Boom length
 - B. Wetted Width with 5m each end
 - C. Overlap is wetted width with 2m each end
 - D. Wetted width with End Guns add 10m each end
 - E. Overlap with end guns
 - F. Sprinkler Diameter 15m

SETTING SPEED CONTROL

- Set speed by (SB2000 have Hydrostatic flow divider) (SB550 have multiple speed gearboxes and water bypass leaver.
- Measuring speed on base model by simply measuring mm / min the Irrigator is walking. The wetted width is 51m, length of run 400m, flow is 10 LPS and the water application is 25mm the machine has to be walking at 470.59mm per min.

Without Computer Controller

Wetted Width		51 Mtrs	Run Length 400Mtrs									
Flow Range			mm Applied									
GPH	LPS		10	15	20	25	30	40	50	75	100	
7930	10	Speed (mm / min)	1176.47	784.314	588.235	470.588	392.157	294.118	235.294	156.863	117.647	
		Run Time (Hr)	5.7	8.5	11.3	14.2	17.0	22.7	28.3	42.5	56.7	

- Measuring speed with controllers by simply reading the display m / hr the Irrigator is walking. The wetted width is 51m, length of run 400m, flow is 10 LPS and the water application is 25mm the machine has to be walking at 14.2m per hour.

With Computer Controller

Wetted Width		51 Mtrs	Run Length 400Mtrs									
Flow Range			mm Applied									
GPH	LPS		8	10	15	20	25	30	40	50	75	100
7930	10	Speed (m / hr)	88.24	70.59	47.06	35.29	28.24	23.53	17.65	14.12	9.41	7.06
		Run Time (Hr)	4.53333	5.7	8.5	11.3	14.2	17.0	22.7	28.3	42.5	56.7

Completion of Run

- Once the Irrigator has completed run disconnect irrigator from anchor.
- Remove hose from Hydrant.
- Using 3 point tow hitch in figure A connect to caster. Lift front wheel a little off the ground.
- Purge Hose using PTO supplied connected to Purge and Tractor.
- Wind on hose by changing from Purge to Hose reel drive.
- Once hose is re wound irrigator is ready to shift again.

Each Model is a little different so correct procedure will need to be checked it the appropriate user Manual.

RAINSPAN BOOM IRRIGATORS

LAYING HOSE AND CABLE

Photo 1:

Connect hose to layout bar and cable to tractor pull

Photo 2:

Wrap hose around rear roller

Photo 3:

Begin laying hose

- Unhitch irrigator from tractor and slide layout bar into three-point tow hitch.
- Position hose guide arm on the same side of the lane as the hydrant and lock in place. This will be the side to lay the hose.
- Pull hose through the roller guides and around the rear layout roller on guide arm (Photo # 2) Connect hose coupling to layout bar with supplied chains (Photo # 1).
- Release the cable drum.
- Connect winch cable to tractor pull (Photo # 1).
- With the tractor, slowly pull the hose and winch cable from the irrigator (Photo # 3) until reaching the hydrant. Remove hose from layout bar and connect to hydrant.
- Drive on to the point where you want the irrigator to stop watering and apply parking brakes to tractor or connect to anchor and check stop plate.
- Return to irrigator unwind remaining surplus hose from the reel.
- Re-engage the cable drum gearbox drive.
- Make sure water flow tap is open.
- Start pump and check pressures.

TRANSPORTING THE IRRIGATOR

- Three Wheeled chassis makes towing very simple by lifting the front wheel off the ground. With the supplied Tractor Hitch it can be lifted or lowered to avoid obstacles going through gullies, over contours, towing from field to field across roads, between sheds, houses and around other Irrigators like Center Pivots. Easy as towing a trailer (figure A)
- Simply Disengage slew gear lock
- Connect hydraulic hoses to tractor remotes ready to slew. (Standard SB2000. Option SB550)
- Hydraulics are operated from Tractor seat
- Slew boom until tips are in-line with direction of travel
- Proceed at walking pace to the start of Run

THE OPTIONS

800 SERIES CONTROL VALVE

- Used for high pressure shutdown at pump.
- High-flow capacity with low friction loss.
- Special natural rubber sleeve diaphragm which is resilient under high pressure, resistant to common irrigation chemicals, and flexible to assure leak-proof shutoff.

DISCHARGE VALVE

- Used for low pressure shutdown at pump.
- Polymeric coating, UV and corrosion resistant.
- Unique design creating low losses at high flow rates.

PURGE

- Quick, efficient and reliable way to purge water from hose.

DIESEL DRIVE

- For assistance with low pressure applications.
- Enables faster retraction speeds.
- Suitable for heavy load applications - ie. hill climbs and heavy black soil.

THE OPTIONS

MECHANICAL COMPENSATOR

- The Mechanical speed Compensator controller is designed to reduce the speed of the cable drum to allow for the build up of cable on the drum.
- For every rotation of the drum there is effectively more cable wound on the drum. This will then in turn keep a consistent speed.

COMPUTER

Functions include:

- Current date and time
- Measurement of the unwound and rewind hose
- Setup of work start time
- Work speed adjustment
- Display of the irrigation time and work end time
- Closing of the irrigation cycle at the programmed distance
- Automatic stop for energy saving

BOOM SLEW FROM TRACTOR AND IRRIGATOR

- Used to manoeuvre boom around farm from tractor.

BRIGGS BOOM

- We offer a range of Briggs Booms that suit our range of Rainspan Irrigators.
- Available in both Galvanized and Stainless Steel.

BRIGGS BOOM - HIGH LIFT

- Essential for tall crops such as maize. Hydraulic lift systems are available in two versions. The first is a 'low lift' model that allows the operator to open the boom at a lower, more manageable height and then hydraulically lift the boom by 600 millimetres to give greater crop clearance of 1.9m.
- The second 'high lift' system has three lift heights – 1.9m, 2.4m and 3.1m. This is essential for tall crops such as maize.

RAINSPAN BOOM IRRIGATORS

FIELD LAYOUT

- Field layout for the irrigator will depend on boom width and field dimensions as shown by the example given above
- Lanes are recommended to be kept straight level grassed mowed and free from trash
- Width of run is at least 1m wider than machine width (see specifications)
- Hydrants are located halfway and to the side of each run (Take half the width of the machine shown in specifications for model and add 1.5m)
- Each dealer will determine how much over laps is needed to suit the crop requirements, field arrangement and wind conditions in their particular area. A standard 2m overlap is recommended

BRIGGS

BOOM IRRIGATORS

Briggs boom irrigators are an established feature of the farming landscape.

Efficient, tough, reliable and surprisingly versatile, the modern Briggs range has been tried and tested by farmers, growers and groundsmen around the world.

All Briggs booms are manufactured in the UK to the same high standards and can be operated with almost any make and size hose reel. Making them the perfect partner for our range of Marani Hard Hose Irrigators.

Briggs booms are based either on a four-wheel chassis or on a three-wheel chassis which allows the whole boom to be transported on the hose reel. (Hose reel mounted).

The linear booms available through the Briggs range start from 18 metres right through to 76 metres.

WHY BRIGGS BOOMS?

UNIFORMITY

- Closely spaced nozzles plus low trajectory equals 90% uniformity, (even in quite windy conditions)
- Benefits include savings in water and more even crop growth.

SOIL BENEFITS

- Controlling droplet size reduces risk of soil capping or 'slumping', compared with a raingun.

REDUCED DROPLET SIZE

- Nelson pressure regulated sprayjets allow the optimum droplet size to be selected for each type of crop. For example, small droplets for leafy salads or larger droplets for root crops.

LESS ENERGY NEEDED

- Booms operate at pressures ranging from just half that recommended for rainguns (2 - 3.5 bar compared to 4.5 - 5.0 bar). So less pressure is needed all the way back to the pump, reducing input power costs.

THE OPTIONS

OFFSET FEED

Keeps the hose reel pipe in the wheeling, making setting up easier and reducing damage to the crop.

HIGH LIFT KIT

Essential for tall crops such as maize. Hydraulic lift systems are available in two versions. The first is a 'low lift' model that allows the operator to open the boom at a lower, more manageable height and then hydraulically lift the boom by 600 millimetres to give greater crop clearance of 1.9m.

STAINLESS STEEL PIPEWORK

Optional stainless steel pipework for corrosive liquids.

The second 'high lift' system has three lift heights – 1.9m, 2.4m and 3.1m. This is essential for tall crops such as maize.

COMMISSIONING

At Rodney Industries, we offer you and your customer the complete package when it comes to your Irrigation Project.

Ask our friendly Sales Team today about commissioning options for your next project.

MARANI SPRAY BOOMS

For the full Marani package, why not consider a Marani Spray Boom. Especially designed and constructed to benefit crop cultivated on large acreages.

Features include:

- Low pressure operation
- Superfine atomised spray
- Uniform irrigation unaffected by wind
- Boom structure in aluminium section pipe
- Folding structure on galvanized steel hinge
- Pivoting structure
- Galvanized steel off-set trolley with 5 pneumatic wheels
- Available in 26, 38 or 42 metres

DIESEL PUMP SETS

At Rodney Industries, we understand the importance of range, reliability and performance. That is why we offer a selection of Pumps and Motors from leading international brands for your Diesel Pump Sets.

Rodney Industries offers an ideal solution to solve your remote and transportable diesel pumping needs. We can provide a selection of Pumps and Motors from leading international brands. The quality build and features stand out and have proven to exceed customer expectations with performance and finish.

Choose from Iveco, Lombardini-Perkins or John Deere diesel motors coupled with reliable Caprari and Rovatti Pumps that are ideal for water transfer, operating Hard and Soft Hose Irrigators as well as hose pull Laterals.

DIESEL PUMP UNITS

K08R715KIT

PERKINS ON TROLLEY WITH ROVATTI PUMP

STANDARD EQUIPMENT

- 4 cylinder air-cooled engine, complete with engine liquids and fuel tank.
- Rovatti F43K80/4H Pump.
- Mounted on two pneumatic wheels trolley, with 60 built in tank.
- Flanged Centrifugal PUMP.
- Electric start with key block and battery.
- PERKINS: ELCOS CEM 250/00 control panel with electric system, engine control device, pressure gauge, pressure switch, 24 hour timer.
- Battery.
- ABS Roof.
- Engine running indicator light.
- Work light for around unit.

DIGITAL IRRIGATION EQUIPMENT

Offering a wide range of Digital Irrigation Equipment from leading brands to service your needs.

The **best way** to connect **your** irrigation systems

DIGITAL IRRIGATION 4.0

Why Digital Irrigation 4.0?

The Digital Irrigation 4.0 system grants a completely integrated management in which the user can analyse and manage with a single interface. The portal is "hosted" on the Cloud.

Field devices exchange data with a webserver continuously. An artificial intelligence analyses the data and provides the user with all the information they need to manage their irrigation.

The humidity sensors inform the user to the state of the soil and combined with weather forecasts, indicate where, when and how to irrigate.

DIGITAL IRRIGATION 4.0

The Marani digital irrigation system analyses and conveys your irrigation scenario to the mobile device of your choice.

Location of the machines, lines to be travelled during the work phases and a volume of processed information that suggests how much water to distribute and where. As the weather and ground moisture conditions change, the software reworks the parameters and provides the new situation. Your intervention is as timely as using your fingers to press a button on the touch display.

INCOMING DATA, OUTGOING INFORMATION

The system has sensors that detect the status of the terrain and the weather situation. The data is transmitted to a cloud server that processes it, transforming it into precise irrigation recommendations, and sends it to the operator's device (smartphone, tablet or PC workstation).

CONTROL OF IRRIGATORS IN THE FIELD

The machines follow the trajectories drawn up by the operator in advance. As the data flows in, and the irrigation scenario changes, it is possible to intervene on aspects such as water pressure or re-entry speed. The system provides a detailed report that can be consulted in real-time.

GPS-Fleet Management for your Irrigation Equipment

WHAT ARE THE BENEFITS OF A RAINDANCER® SYSTEM?

OVERVIEW

At any time, display the maps or the list of machines on your smartphone or pc. Machine location, water application, current water pressure and finish time.

CONTROL

Irrigation machines can be started and stopped from anywhere. If it starts to rain or it is too hot at noon - just stop from your smartphone. The speed can be adjusted automatically according to stored soil conditions.

NOTIFICATION

If the machine does not move or the pressure is too low, too high, a text message is sent. Also, upon entering critical zones - e.g. roads or railway lines on impact edge you will be notified via SMS.

SCHEDULING

Irrigation runs are shown with detailed information and colour coordinated - planning your next irrigation movements.

PUMPS

Start and stop pumps via smartphone. In irrigation pipelines, Raindancer automatically switches the pumps on and off. If you have a frequency controlled pump, Raindancer can adjust the parameters dynamically.

REPORTS

All data about your irrigation is saved in a database automatically. It is permanently available - reports produced showing water application by hose reel, field or crop. Data may be exported to MS Excel and processed there.

RAINDANCER

RAINDANCER

THE GPS MODULE

The raindancer module is built from an heavy-duty polycarbonite casing and a solar panel covered with a special. It is highly splash water and dust resistant. The complete assembly is mounted on a corrosion resistant aluminium platform. This platform makes mounting to your gun carriage very easy.

Besides the strong solar panel there is also a 4.000 mAh built-in battery. This combination makes a non-stop usage throughout a complete season possible.

SECTOR CONTROL

Thanks to various starting programs, classic pre-irrigation is no longer necessary.

The angles are set automatically according to field shape or obstacles and readjusted at any time.

If the irrigation run is narrowed, the speed is adjusted according to the irrigated area.*

You are in full control at all times, as a manual operating mode with remote control via app is also possible. This is helpful, for example, in changing wind conditions.

THE BEACON

Bring your pumps into the Raindancer portal. The Beacon allows your pump to communicate over the Internet. This can be done by using mobile networks or an existing LAN of your pump.

Monitor your pump in real time and know the exact status of your devices. (flow rate, meter reading, power, pressure)

Use remote control to take action. If necessary, they can start, stop or adjust the pressure. If a malfunction occurs during operation, you will be notified.

MA Rain 26 COMPUTER

The MA-Rain 26 computer features the following programmable functions:

- Working speed in mt\h or ft\h.
- Delayed start (in minutes) before retraction starts.
- Delayed stop (in minutes) before opening or closing the discharge valve (optional) or the shut-off valve.

The monitor then indicates:

- Remaining working time in hours and minutes.
- Working speed in mt\h or ft\h.
- Meters\feet of unwound hose.

MA Rain 56 COMPUTER

**PROUD TO
BE YOUR
PARTNER IN
IRRIGATION**

The MA-Rain 56 computer features the following:

- Compact case.
- 4" high contrast, colour display.
- Optical encoder, for a fast selection of settings.
- 2 x 4 keys for navigation with back lighting.
- Additional keys for alarm setting.
- I/O control module.
- On/Off key.
- Commands and features have an intuitive graphical user interface, to avoid keys in the lingo.
- Detailed alarm chart, with explicit reference to the components.
- Fast and easy parameters' /datas' settings.

CONSOLE RAIN COMPUTERS

Need to replace or upgrade your old MaterMacc Computer System?

CONSOLE RAIN 130

The Startec Console Rain 130 computer features the following:

- Allows the rewinding speed adjustment only by turning the knob on the desired speed.
- From 5 to 95 m/h (20-295 ft/h).
- It has to be connected to a roller speed sensor and to speed the adjustment motor.
- Power supplied by a 12 Volt battery.

The three leds indicate:

- The sensor functioning
- The adjustment motor functioning
- The battery charge

CONSOLE RAIN 260

Electronic control unit with back-lit LCD and 10 function-keys. It has to be linked to a system and to the speed adjustment motor and to an end-irrigation sensor. Power supplied with 12 Volt, by a battery.

Main Functions include:

- Measure of unwound hose
- Start irrigation/End irrigation
- Initial pause
- Rewinding at programmed speed, or programmed quantity (mm)
- Final pause

Main Options include:

- GSM
- Flowmeter control of system

The most widely used control unit in the sector. Extremely reliable. With just the starting of the motor pump, the CEM-250/10 automatically monitors all its parameters and alarms, with no operator adjustment. It is supplied with the electronic probe for the pump. Suitable for mounting directly on the motor pump.

Unit for Control and Protection for **IRRIGATION MOTOR PUMPSETS**

On the panel the functions are:

- Hour-meter
- Oil pressure gauge
- Water or oil thermometer
- Tachometer
- Pump water pressure gauge
- Timer
- Fuel level gauge
- Pump protection exclusion
- Battery and oil lights
- Protections intervention
- Emergency stop

Recent control unit made with functions similar to the CEM-250/10, but simplified.

With just the starting of the motor pump, the CEM-380 automatically monitors all its parameters and alarms, with no operator adjustment. It is supplied with the electronic probe for the pump. Suitable for mounting directly on the motor pump.

Unit for Control and Protection for IRRIGATION MOTOR PUMPSETS

Key Features Include:

- Digital instruments (hour-meter, timer, pump water pressure gauge, fuel level indicator, tachometer, battery voltmeter).
- Motor pump failure automatic monitoring (low oil pressure, over-temperature, belt breakage, minimum fuel level, available A1, A2 (low diesel fuel pressure), low coolant level, insufficient pump water pressure, pump water overpressure).
- Manual starting with key.
- Battery and oil lights.
- Pump protection exclusion.
- Accompanied by an electronic transmitter of water pressure.

Unit for Control and Protection for IRRIGATION MOTOR PUMPSETS

Control units that as well as manual operator control also allow its automatic control by external contact. With just the starting of the motor pump, the CIM-131 automatically monitors all its parameters and alarms, with no operator adjustment.

If connected to the actuator, installed on the accelerator of the diesel engine, these carry out automatic regulation to keep the irrigation pressure constant.

They are supplied with the electronic probe for the pump.

Key Features

- Digital instruments (hour-meter, oil pressure gauge, water or oil thermometer, timer, pump water pressure gauge, fuel level indicator, tachometer, battery voltmeter).
- Adjust engine speed through the actuator (on request) maintaining constant the pressure of the irrigation system.
- Controls the flow of water in the pipe.
- Motor pump failure automatic monitoring (low oil pressure, overtemperature, belt breakage, minimum fuel level, available A1, low diesel fuel pressure, low coolant level, insufficient pump water pressure, pump water overpressure).
- Remote control (start and stop).
- Clock for programming the start and stop of the machine.
- Acceleration and deceleration automatically adjusted upon starting and stopping of the pump.
- Frost protection and pressure boost functions.
- Battery and oil lights.
- Pump protection exclusion.
- Accompanied by an electronic transmitter of water pressure.

Unit for Control and Protection for IRRIGATION MOTOR PUMPSETS

Control units that as well as manual operator control also allow its automatic control by external contact. Also, the CIM-137/4GW has in addition the integrated modem-GSM 4G that allows remote control by app, browser or SMS.

With just the starting of the motor pump, the CIM-137/4G automatically monitors all its parameters and alarms, with no operator adjustment. If connected to the actuator, installed on the accelerator of the diesel engine, these carry out automatic regulation to keep the irrigation pressure constant. They are supplied with the electronic probe for the pump. Suitable for mounting directly on the motor pump, both flush mounted and with their possible independent bracket.

OTHER FEATURES INCLUDE

- Digital instruments (hour-meter, oil pressure gauge, water or oil thermometer, timer, pump water pressure gauge, fuel level indicator, tachometer, battery voltmeter).
- Adjust engine speed through the actuator (on request) maintaining constant the pressure of the irrigation system.
- Controls the flow of water in the pipe.
- Motor pump failure automatic monitoring (low oil pressure, over-temperature, belt breakage, minimum fuel level, available A1, low diesel fuel pressure, low coolant level, insufficient pump water pressure, pump water overpressure).
- Remote control by app, browser or SMS.
- Clock for programming the start and stop of the machine.

HOSE, GUNS & SPRINKLERS

An irrigator is not complete without all the extras and at Rodney Industries, we have a great selection of irrigation hose as well as leading brands of guns and sprinklers.

FLOWMASTER

IRRIGATION HOSE

Flowmaster is a flexible layflat drag hose for all types of irrigation applications.

CONSTRUCTION

Flowmaster comprises a circular woven high tenacity polyester reinforcement totally encapsulated in a tough elastomeric polyurethane cover and lining. Designed to fit a wide range of coupling types.

BOOSTS REELER CAPACITY

Unique 'fine weave' one-piece construction maximises reeler capacity.

FLEXIBILITY

Flowmaster is available in standard lengths of 200 meters and longer lengths up to 400 meters. It is the premium irrigation hose solution for both travelling irrigators and linear irrigation systems

LONG SERVICE LIFE

Designed for long service life with minimal maintenance. Tough and durable polyurethane cover with exceptional resistance to abrasion, cutting, ozone, UV, weathering and microbiological attack. Excellent in tropical climates.

OPERATING PERFORMANCE

Flowmaster is steamed to size which minimizes snaking and ensures the hose coils back easily after use. With a maximum swell of only 6% at normal operating pressure level of 7 bar, unacceptable hose contraction and excessive weight is severely reduced or eliminated.

FAST DEPLOYMENT AND RETRIEVAL

Superior handling; quick and easy to deploy and retrieve long continuous lengths without twisting, using light duty reels.

QUALITY AND RELIABILITY

Flowmaster is manufactured in compliance with BS EN ISO 9001: 2008 quality management system. Raw materials, components and finished products are rigorously tested and inspected to ensure excellent product reliability. Meets ASAE 394.

LOW OPERATING COSTS

Highly flexible for minimum pressure loss and maximum hydraulic efficiency.

WARRANTY DETAILS

For details on Angus Flexible Pipelines warranty, please refer to page 9 of our General Details.

BIG GUN

ENGINEERED SIMPLICITY,
PROVEN DURABILITY.

FOR OVER 4 DECADES, NELSON IRRIGATION HAS BEEN MANUFACTURING "THE ORIGINAL" BIG GUN® SPRINKLER.

Nelson pioneered the concept of a slow, steady, and uniform forward and reverse drive action, and the Big Gun's drive vane automatically compensates through a full range of nozzle sizes and pressures. A simple, reliable adjustment allows you to set the arc to within 1 degree without overriding the stops; a setting that will not change over time, as proven by years of use in the field.

NELSON IRRIGATION

NELSON IRRIGATION

BIG GUNS®

In the field of large-volume sprinklers, Nelson Big Guns® are recognized the world over as the leader in quality and performance. They are engineered and precision manufactured for heavy-duty reliability and long wear life with minimum maintenance required. Every Nelson Big Gun® is subjected to the toughest inspection testing and quality control standards in the industry.

irrigation we have a
sprinkler and gun to suit.**

SIME IRRIGATION

SIME GUNS

Sprinklers of middle or high capacity and pressure rotating at full circle or parts circle, with slow return. Particularly suitable for all types of watering machines can be used also for centre pivots and normal installations. An intermittent and adjustable jet-breaker working only on the return, allows the user to get a uniform distribution of rain fall all over the irrigated area.

komet

INNOVATIVE
IRRIGATION

the komet advantage

It is important that every irrigation system operates reliably in order to avoid yield losses, waste of energy with its associated costs but more than anything to optimise the soil potential. The gun not being continuously monitored, has to operate always at its best without the necessity of adjustments or maintenance.

KOMET GUNS

It is important that every irrigation system operates reliably in order to avoid yield losses, waste of energy with its associated costs but more than anything to optimise the soil potential. The gun not being continuously monitored, has to operate always at its best without the necessity of adjustments or maintenance.
